

City of Glasgow College

In August 2013 City of Glasgow College worked with Anytime Leisure to open their brand new fitness facility, the CitySport+, which is located at their city centre campus on Cathedral Street.

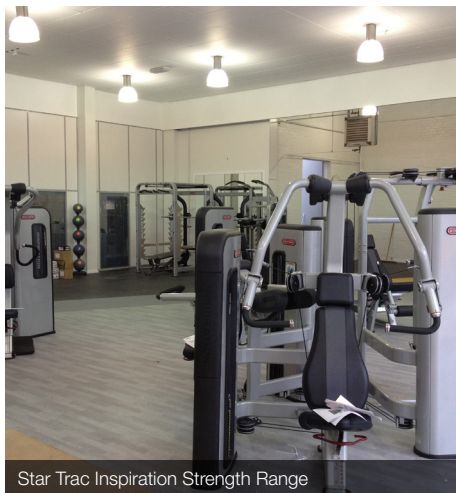

With the recent merging of several smaller colleges to form City of Glasgow, the college had planned to combine the old equipment from their 3 existing locations into one new facility. After various meetings and site visits, Anytime Leisure provided drawings to show how the new facility could look in various scenarios which the college had been considering. One design also outlined how the facility would look with a selection of premium quality new equipment. The college then considered the options set out for them and opted to open the facility with a full range of brand new fitness equipment.

State of the Art Star Trac E Series Cardiovascular Equipment

Impulse Sterling Full Rack and IT Benches

Star Trac Inspiration Strength Range

Star Trac Max Rack

The new equipment for the site was grouped in areas dedicated to functional, free weight, CV and fixed resistance training. Each of these consisted of premium products from some of the fitness industry's top brands, such as Cybex and Star Trac cardio equipment, Impulse and Human Sport fixed resistance machines and Jordan functional equipment.

After various meetings and site visits, Anytime Leisure provided final drawings and 3D images to show how the new facility could look. Once the final plans were signed off the installation took place in August 2013 over just two days to minimise disruption.
